SUMMARY

DevOps Engineer with 3+ years of experience in designing, automating, and managing scalable cloud infrastructure on AWS. Strong expertise in CI/CD pipeline development, Infrastructure as Code (Terraform), and container orchestration using Kubernetes. Proven ability to improve deployment efficiency, reduce infrastructure costs, and enhance system reliability. Skilled in implementing monitoring, automation, and DevOps best practices to support high-availability production systems.

SKILLS

Cloud & Infrastructure

AWS (EC2, EKS, S3, IAM, VPC, RDS, ALB, CloudWatch), Linux Administration, Networking Fundamentals

DevOps & Automation

Jenkins, GitHub Actions, Git, ArgoCD, Terraform, Ansible, CI/CD Pipelines

Containers & Orchestration

Docker, Kubernetes, Helm

Monitoring, Scripting & Security

Prometheus, Grafana, CloudWatch, Bash (Shell), Python (Basic), IAM Policies, Trivy, SonarQube

EXPERIENCE

DevOps Engineer

Aarialife Technologies Pvt. Ltd

📅 01/2023 📍 Pune, India

- Designed and implemented CI/CD pipelines using Jenkins and GitHub Actions to streamline build and deployment workflows.
- Automated infrastructure provisioning using Terraform and Ansible, enabling consistent environment setup across Dev, QA, and Prod.
- Deployed and managed containerized applications on Kubernetes (AWS EKS), ensuring high availability and smooth rollouts.
- Implemented monitoring and alerting using Prometheus, Grafana, and CloudWatch to improve system visibility and incident response.
- Impact:**
- Improved deployment reliability and reduced manual effort through automation; optimized AWS resource usage resulting in ~20% cost savings.
- Reduced incident resolution time and improved system stability through effective monitoring and alerting practices.

PROJECTS

AllBirds - Ecommerce Website

📅 07/2024

An ecommerce website project aimed at providing seamless online shopping experience

- Automated build and deployment workflows using Jenkins, Docker, and AWS, improving release efficiency and consistency.
- Deployed microservices on Kubernetes (EKS) with auto-scaling and rolling updates to ensure high availability during peak traffic.

United Healthcare – DevOps Implementation

📅 01/2023 - 06/2024

DevOps implementation project for a healthcare provider to enhance service delivery and reliability

- Standardized CI/CD pipelines using Jenkins, Docker, and Kubernetes (EKS) to improve deployment consistency and reduce failures.
- Implemented Infrastructure as Code using Terraform and centralized monitoring (Prometheus, Grafana, CloudWatch) to enhance system reliability and operational efficiency.
